FIRST WORDS

This book is aimed to provide pharmacy students at college level with solid foundation in language, terms and phrases about symptoms and diseases as well as pharmacy and pharmacology. From that, this is hoped to enable pharmacy students, who are studying English as a Foreign Language (EFL) at the upper elementary level, to understand and to present some prescriptions and some simple texts about usual kinds of medicines.

This document is included 26 units which are about pharmacology, drugs developments, pharmaceutical production of drugs, how to use some kinds of usual medicines, risks and precautions. Besides, students are supplied with more particular exercises and further practices for their self-study and self –evaluation. As a result, these documents will help them much for final examination. Also, students are able to utilize terms of pharmacology and pharmaceutical industry in real situations.

We would like to thank our staff members who contributed for these documents and papers. We would also receive any comments from specialists, colleagues and students to improve this document of work.
