## ABSTRACT

The research was conducted to understand the students' perceptions of the benefits and challenges in the process of acquiring knowledge from e-learning. This study concentrated on the assessment effective level, difficulty, and suggestions to improve, which contributed to developing education. To collect the data, the researcher used quantitative questionnaires with 145 participants from different courses at Nam Can Tho University. In terms of qualitative data was collected through a semi-structured interview for a deeper understanding of the learners' experiences. The results showed that students' perceptions of the benefits of e-learning included primarily flexibility, easy access to materials, and enhanced personal experience. Besides, some challenges were also identified, such as a lack of interaction, unstable connection, which can lead to a loss of motivation, and poor learning outcomes. From these findings, suggestions for improvement were also highly appreciated, with improving teaching methods, supporting motivation, and counseling for students to better engage in e-learning classrooms, which brings positive aspects to the educational environment.
